FOCUS

"Developing secure, scalable and reliable software solutions with a focus on quality and maintainability."

EXPERIENCE

Software Developer

SoWeDid Software Solutions

September 2025 – October 2025 | Remote

- Researched and documented a Micro Frontend approach using Angular Module Federation to support independently developed frontend modules.
- Collaborated with UI/UX teams to transform static HTML prototypes into reusable Angular components, accelerating the transition from design artifacts to production-ready features.

Software Developer

SoWeDid Software Solutions

Ocober 2020 – May 2023 | Hyderabad, India

- Built and enhanced enterprise web applications across the backend and frontend, with a primary focus on Java/Spring Boot, database-driven functionality and Angular applications.
- Solved integration requirements with external systems by integrating third-party APIs into existing Spring Boot workflows and handling application-specific request, response and error flows.
- Modernized legacy Java implementations by replacing repetitive collection-processing logic with Java 8 Streams, improving readability and reducing unnecessary boilerplate.
- Traced application issues across Angular, Spring Boot, database and search layers to identify root causes and resolve issues beyond a single application layer.
- Investigated slow search and data-retrieval scenarios in Elasticsearch and optimized queries and indexing to improve search responsiveness.
- Translated business reporting requirements into BIRT reports and optimized report generation where complex queries and large datasets affected execution time.
- Diagnosed inefficient scheduled-job execution and optimized custom Quartz jobs to improve background processing reliability and reduce unnecessary application workload.
- Addressed database-schema consistency across environments by introducing Liquibase-based migration management and documenting the workflow for developers and new team members.
- Enhanced Angular applications with data tables, pagination, sorting, localization and environment-specific configuration while supporting the migration from AngularJS to Angular 8.
- Implemented Spring Boot email-template integration to support automated application notifications and business workflows.

EDUCATION

M.Eng. in Internetworking

Dalhousie University

Sept 2023 – May 2025 | Halifax, Canada

- Relevant Courses: Programming in Internetworking (Python, Docker, CI/CD pipelines)

B.E. in Electrical and Electronics Engineering

Anna University

June 2016 – Sept 2020 | Chennai, India

- Relevant Courses: Object Oriented Programming (C, C++, Java languages and Algorithms)

SKILLS

Java JavaScript TypeScript HTML CSS SCSS JUnit Mockito SLF4J Hibernate

Spring-Framework Spring-Boot Spring-Data Spring-Security Spring-Cloud Spring-WebFlux Angular Microservices Module-Federation

MySQL PostgreSQL

Eclipse IntelliJ Postman VSCode DBeaver

Maven Gradle Liquibase

Git Jira Github Github-Actions Github-Packages Docker

HTTP HTTPS JSON REST Swagger

PROJECTS

Centralized Authentication Server

View README

January 2026 – Present

A centralized authentication and identity service that acts as the source of truth for the microservices ecosystem. It issues JWTs containing tenant and role information and provides multi-tenancy and role-based access control (RBAC) for downstream services.

Reactive Gateway

View README

September 2025 – Present

A reactive API Gateway that serves as the secure entry point for the client UI. It provides dynamic routing, JWT-based security, CORS and CSRF protection and request filtering before traffic reaches downstream services.

Data Management System

View README

December 2025 – September 2026

A full-stack data management application with a Spring Boot REST API and Angular UI. The application focuses on secure multi-tenant data access, database auditing, optimized data handling and Angular Signals for efficient client-side state management.

Enterprise Shared Library

View README

February 2026 – Present

A reusable library that provides common domain models, utilities, validation and configuration across a microservices ecosystem. Designed to reduce duplication and maintain consistent development patterns across both Servlet and Reactive Spring applications.

Error Handling Library

View README

August 2026 – Present

A modular Spring Boot error-handling library providing RFC 7807 Problem Details across both Servlet (Spring MVC) and Reactive (WebFlux) applications, with configurable components designed to avoid conflicts with existing application configurations.

Portfolio Application

View README

June 2025 – Present

A full-stack portfolio application built with Spring Boot and Angular and deployed using Docker and GitHub Actions. The project focuses on REST API development, automated testing, CI/CD and deployment practices, with ngrok used to securely connect the deployed application with local development resources.
